Machine Learning HW4

ML TAs ntu-ml-2021spring-ta@googlegroups.com

Outline

- Task Description
- Dataset
- Data segmentation
- Kaggle
- Guidelines

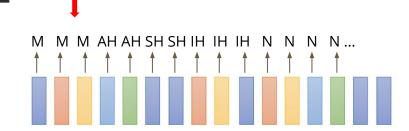

Task Introduction

- Self-attention
 - o Proposed in GOOGLE's work, <u>Attention is all you need</u>. It combines the strengths of RNN (consider whole sequence) and CNN (processing parallelly).
- Main goal: Learn how to use transformer.

HW2: Phoneme classification

Task: Multiclass Classification

Framewise phoneme prediction from speech.

Machine

What is a phoneme?

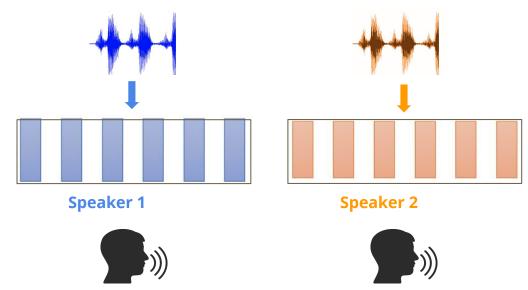

A unit of speech sound in a language that can serve to distinguish one word from the other.

- <u>b</u>at / <u>p</u>at , b<u>a</u>d / b<u>e</u>d
- Machine Learning → M AH SH IH N
 L ER N IH NG

HW4: Speaker classification

Task: Multiclass Classification

Predict speaker class from given speech.

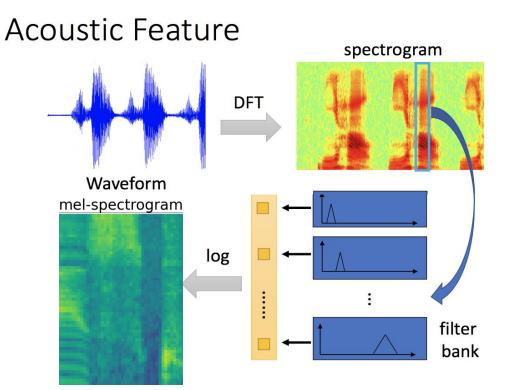

Dataset

- Training: 69438 processed audio features with labels.
- Testing: 6000 processed audio features without labels.
- Label: 600 classes in total, each class represents a speaker.

Data Preprocessing

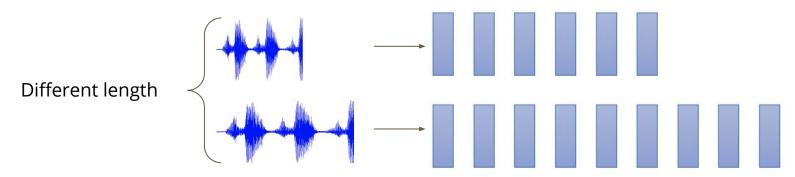

ref.
prof. Hung-Yi Lee
[2020Spring DLHLP] Speech
Recognition

Data formats

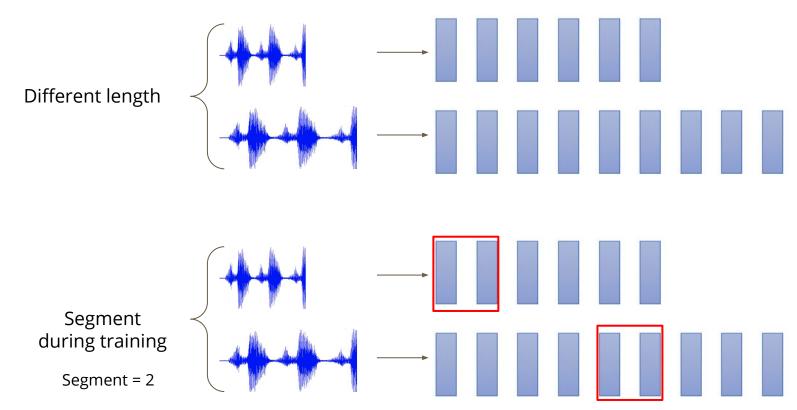

- Data Directory
 - metadata.json
 - testdata.json
 - o mapping.json
 - uttr-{random string}.pt
- The information in metadata
 - o "n_mels": The dimention of mel-spectrogram.
 - o "speakers": A dictionary.
 - Key: speaker ids.
 - value: "feature_path" and "mel_len"

```
metadata.json
testdata.json
uttr-fff235bfc70d45b6b434c754a8136cd4.pt
uttr-fff284c8dfb94ed99010fb09208d7bcf.pt
uttr-fff286c666464b7ea2ca28811acf8f34.pt
uttr-fff3b487f8cd4905bca421b2d585bcf5.pt
uttr-fff461c64f7e4194b509b5246d2a1851.pt
```

Data segmentation during training

Data segmentation during training

Sample Code

Colab Link: <u>link</u>

- Baselines:
 - Simple: Run sample code and know how to use transformer.
 - Medium: Know how to adjust parameters of transformer.
 - Hard: Construct <u>conformer</u> which is a variety of transformer.

Requirements- Simple

- Build a self-attention network to classify the speaker with the sample code.
- Simple public baseline: 0.82523

Requirements- Medium

- Modify the parameters of the transformer modules in the sample code.
- Medium public baseline: 0.90547

```
class Classifier(nn.Module):
  def __init__(self, d_model=80, n_spks=600, dropout=0.1):
    super(), init ()
   # Project the dimension of features from that of input into d model.
    self.prenet = nn.Linear(40, d_model)
    # TODO:
       Change Transformer to Conformer.
        https://arxiv.org/abs/2005.08100
    self.encoder_layer = nn.TransformerEncoderLayer(
      d_model=d_model, dim_feedforward=256, nhead=2
     self.encoder = nn.TransformerEncoder(self.encoder_layer, num_layers=2)
    # Project the the dimension of features from d_model into speaker nums.
    self.pred_layer = nn.Sequential(
     nn.Linear(d_model, d_model),
     nn.ReLU(),
     nn.Linear(d_model, n_spks),
```

Requirements- Hard

- Improve the performance by constructing the <u>conformer</u> layer.
- Hard public baseline: 0.95404

```
class Classifier(nn.Module):
  def __init__(self, d_model=80, n_spks=600, dropout=0.1):
    super(). init ()
   # Project the dimension of features from that of input into d_model.
    self.prenet = nn.Linear(40, d_model)
   # TODO:
       Change Transformer to Conformer.
       https://arxiv.org/abs/2005.08100
   self.encoder_layer = nn.TransformerEncoderLayer(
      d_model=d_model, dim_feedforward=256, nhead=2
   # self.encoder = nn.TransformerEncoder(self.encoder_layer, num_layers=2)
   # Project the the dimension of features from d_model into speaker nums.
    self.pred_layer = nn.Sequential(
     nn.Linear(d_model, d_model),
      nn.ReLU(),
     nn.Linear(d_model, n_spks),
```

Grading

```
    Evaluate Metrics = @1 Accuracy。
    Simple baseline (public) +1 pt (sample code)
    Simple baseline (private) +1 pt (sample code)
    Medium baseline (public) +1 pt
    Medium baseline (private) +1 pt
    Hard baseline (public) +1 pt
    Hard baseline (private) +1 pt
    Upload code to NTU COOL +4 pts
```

Total: 10 pts

Submission Format

- "Id, Category" split by ',' in the first row。
- Followed by 6000 lines of "filename, speaker name" split by ','.

```
Id Category

```

Deadlines

- Kaggle: 2021/04/16 23:59 (UTC+8)
- NTU COOL: 2021/04/18 23:59 (UTC+8)

Grading -- Bonus

 If you got 10 points, we make your code public to the whole class.

 In this case, if you also submit a PDF report briefly describing your methods (<100 words in English), you get a bonus of 0.5 pt. (your report will also be available to all students)

Report template

Code Submission

- NTU COOL (4pts)
 - Compress your code and report into

<student ID>_hw4.zip

* e.g. b06901020_hw4.zip

- We can only see your last submission.
- Do not submit your model or dataset.
- If your code is not reasonable, your semester grade x 0.9.

Code Submission

- Your .zip file should include only
 - o **Code**: either .py or .ipynb
 - Report: .pdf (only for those who got 10 points)
- Example:

Regulation

- You should NOT plagiarize, if you use any other resource, you should cite it in the reference. (*)
- You should NOT modify your prediction files manually.
- Do NOT share codes or prediction files with any living creatures.
- Do NOT use any approaches to submit your results more than 5 times a day.
- Do NOT search or use additional data or pre-trained models.
- Your final grade x 0.9 if you violate any of the above rules.
- Prof. Lee & TAs preserve the rights to change the rules & grades.
